SUBJECT: Clarification Regarding Toxic Substances Control Act (TSCA)

The **Toxic Substances Control Act (TSCA)** is a primary U.S. law, administered by the Environmental Protection Agency (EPA), that grants the EPA authority to **evaluate and control potential risks to human health and the environment from new and existing chemical substances** manufactured, processed, imported, or distributed in the United States

The **importer of record** into the United States is the party responsible for providing the TSCA (Toxic Substances Control Act) certification statement to U.S. Customs and Border Protection (CBP). This can be the consignee, the actual owner, or an authorized agent (such as a customs broker) acting on their behalf.

Chemicals with Specific Regulations or Bans

- **Polychlorinated biphenyls (PCBs):** Their production was banned in 1979, but existing materials are still heavily regulated for use, management, and disposal.
- **Asbestos:** Subject to extensive regulations regarding its use, handling, and disposal, particularly in schools and commercial buildings.
- **Lead:** Specifically lead-based paint hazards.
- **Mercury:** Subject to specific import/export requirements and use restrictions.
- **Formaldehyde:** Specifically, the emission standards for composite wood products (TSCA Title VI).
- **Chlorofluorocarbons (CFCs):** Production and use have been limited.

Our Commitment

We take environmental and health concerns seriously. The materials used in our valves are selected to meet the highest standards of performance and safety. We are unaware of any chemical substances in the manufacturing of our products that are on the list of controlled substances. We remain committed to providing safe, effective, and compliant products. If you have any further questions or require additional documentation, please do not hesitate to contact us.
